

GRIZZLY

SANDGROPER

80-108 Light weight broad acre disc plough

GRIZZLY'S SANDGROPER has been designed to fill a gap in our range, a gap which our competitors have enjoyed until now.

It has reduced weight and cost.

Suitable for lighter soils where only a few inches of penetration is required, while still cutting out weeds and leaving a level "seed bed" finish.

Reduced weight makes it ideal for rocky conditions, with less chance of bringing unwanted rocks to the surface. The **SANDGROPER** will have the competition worried.

No excess weight where it is not needed. More price competitive. Utilizes the proven Grumpy style running gear. Three gang angles for versatility. Folding Wing design follows ground formation.

Uses existing proven features. Up To 26" discs to still provide effective cut out on 9" spacings. Choice of 3 gang angles to allow full cut out in shallow working. The Sandgroper is still a true tandem offset sics plough.

Dual tyres give maximum flotation in light country and give increased support when road transporting.

(Flotation options Available)
